# Abstract

Since the inception of the Blockchain in 2008, cryptocurrencies have grown in popularity and are now used as a medium of trade by millions of individuals worldwide. Being a good way to store wealth, these virtual currencies are backed by unbreakable cryptography and are supported by a variety of groups. Caprice Finance seeks to build the Caprice Finance Token in order to facilitate the user's financial progress and to be the best in the cryptocurrency field, while also ensuring the token's long-term growth. We are also striving to develop metaverse and NFT solutions so that crypto technology can be put to better use and generate new sorts of value. Our mission is to extend the reach of our breakthroughs across the globe.

# Introduction

It is a rather usual mistake of conflating traditional finance's understanding of deflation with that of cryptocurrency. Cryptocurrencies benefit from deflation, whereas traditional finance sees it as a negative. Deflation is a term used in conventional finance to describe a drop in the value of an asset as a result of factors such as over-minting.

As time goes on, the market supply of a deflationary crypto shrinks. This parameter signifies that users or our project's staff will engage in activities that contribute to the token's supply being reduced on the blockchain. Token burning is a popular method for achieving this goal.

Deflation in cryptocurrencies, as previously stated, mostly includes the burning of tokens in circulation. Burning mechanisms on our platform include buyback and burn, as well as transaction burning. The buyback mechanism entails the platform purchasing tokens from holders and storing them in an inaccessible address. While, in terms of transactional burning, a platform makes use of a smart contract that automatically burns a portion of transaction costs. This process is very dependent of our platform's transaction volume (the more transactions, the more tokens are burned)

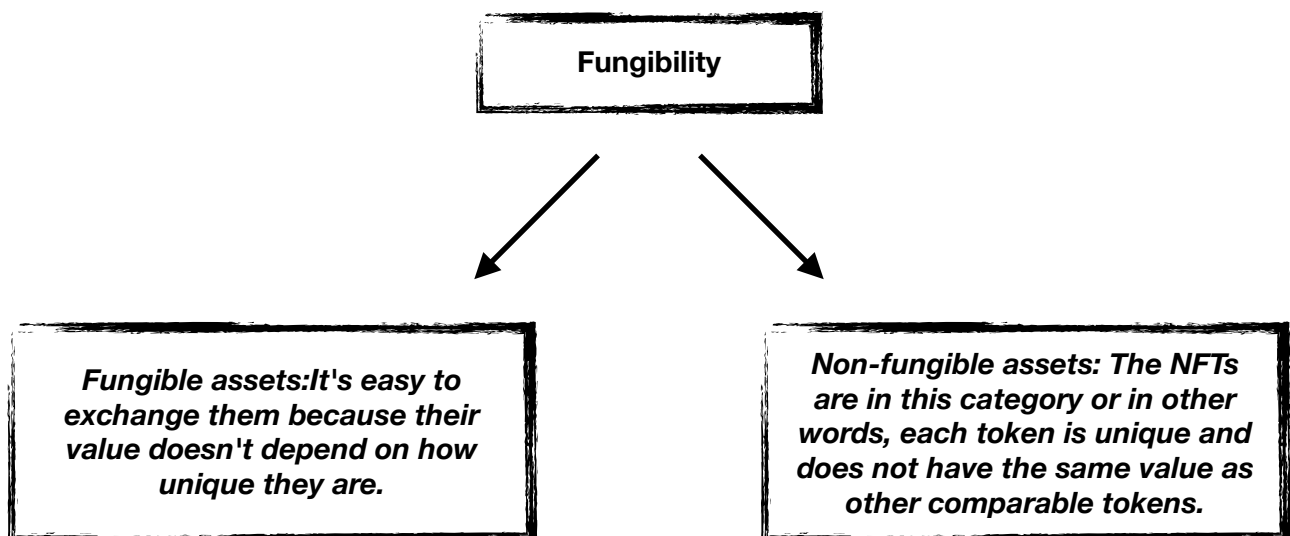

## Caprice Finance Token

The Caprice Finance Token is a multi-chain (ETH,BSC and POLYGON networks) cryptocurrency that aims to develop metaverse and NFT solutions in order to maximise the use of crypto technology and generate new forms of value. As said previously the token's nature will be deflationary, which means that every time you make a transaction, Caprice Finance Token will burn a portion of the transfer value. As a result, there will be reduce in the total supply and raise in the token's value!

# NFT

NFTs or non-fungible tokens are a unique identifier that can be used to assign and establish ownership of digital assets through cryptography. Since 2014, NFTs have been garnering a lot of attention because they've become an increasingly popular method of purchasing and selling digital artwork. The uniqueness of NFTs is ensured by their secure recording on a blockchain. NFTs can also be difficult to alter or counterfeit thanks to this new technology.

**Fungibility as an economic principle is divided into two categories**

***The economic idea of fungibility (table above) is essential for understanding NFTs.***

## Caprice Finance NFT Platform

Without a doubt, the NFT Marketplace is a vital component of our community. With your help, we're building the finest NFT Marketplace.

We are pleased to inform that our NFT Marketplace in the near future will accept new NFTs for integration. When you will integrate an NFT into the Caprice Finance platform, the NFT Vault will produce a token address for you automatically based on the network being used. Additionally, you will have an opportunity to verify, exchange, or burn your NFT.

***\$CFT tokens will be used to gain access to additional services and content.***

If you own NFT	If you create NFT
It is impenetrable to any attempt at manipulation.	You are the one who establishes the scarcity.
You'll have no trouble verifying your ownership of it.	You can easily establish your authorship.
You can keep it indefinitely.	You can earn royalties on each sale.
You can sell it, which may result in resale royalties for the original inventor.	You can sell it.

# The Caprice Finance Bridge

A bridge is a group of smart contracts that enables the exchange of data and transactions between multiple blockchains. Typically, you can access a bridge via a web application. You can establish a connection between your wallet and the web application and then initiate a transaction. The Caprice Finance Token will be linked to the Ethereum, Binance Smart Chain, and Polygon networks via the Caprice Finance Bridge. Depending on the networks involved, there may be a minor price for bridging to cover inherent network transaction costs.

# Caprice Finance Airdrop

We've devised a new method for accumulating \$CFT tokens on the side. As many people as possible will be able to benefit from Caprice Finance thanks to the airdrop technique. Existing Caprice Finance token holders gain a 2% transaction fee on all network transactions. If you keep the \$CFT tokens in your wallet, you will receive additional tokens. Each transaction increases the value of your Caprice Finance Token.

# Yield Farming

There are several ways to generate interest on a cryptocurrency portfolio in the crypto market. Yield farming is becoming a very commonly used approach of supplementing one's primary income for crypto aficionados. It entails lending or staking your crypto coins or tokens in exchange for fees or interest on transactions.

## How does it work?

Liquidity providers (LPs) are encouraged by yield farming protocols to stake or lock up their crypto assets in a liquidity pool based on smart contracts. Transaction fees, interest from lenders, or a governance token can all be used as incentives. It is stated as an annual rate of return (APY). The value of the issued returns decreases in direct proportion to the increase in the pool of available liquidity.

## What is APY in Yield Farming?

Most protocols and platforms, as well as yield farmers, evaluate returns in terms of annual percentage yields (APY). The annual percentage yield (APY) on a certain investment is the amount of money investors earn over the course of a year. The annual percentage yield (APY) takes into account the compounding interest that is calculated on a regular basis and applied to the principal.

# Tokenomics

The Caprice Finance Token is developed to work with a variety of different blockchains. Each of the blockchains on which Caprice Finance operates has a distinct value proposition, which enables the Caprice Finance ecosystem to expand and prosper.

Protocol	Ticker	Contact Adress
Binance Smart Chain	\$CFT	
Ethereum	\$CFT	
Polygon	\$CFT	

<b>Token name:</b>	<b>Caprice Finance</b>
<b>Token symbol:</b>	<b>\$CFT</b>
<b>Total supply:</b>	<b>99,000,000,000 \$CFT</b>
<b>Total pre-sale:</b>	<b>34,650,000,000 \$CFT</b>

Caprice Finance Team will shortly provide a pre-sale vesting schedule to ensure the stability and value of your \$CFT tokens. We aspire to have your long-term trust and confidence in us as our prime motivation.

# Token Distribution and Transaction Fee's

Description:	Share:
Distribution	50%
Pre-Sale	35%
Team Funds	5%
Bridge Reserve	5%
NFT Platform	2,5%
Marketing	2,5%

**TAX 4% :**  
 Finance Airdrop 2%  
 Deflection 2%

# Roadmap

## Phase 1:

- I. Team Formation
- II. Caprice Finance Website is live
- III. Pre-Sale
- IV. Social Media Awareness
- V. Airdrop
- VI. Audit Report

## Phase 2:

- I. PANCAKESWAP listing
- II. Coinmarketcap & Coingecko listing

## Phase 3:

- I. CEX listing
- II. NFT marketplace
- III. Be listed on over 25 exchanges
